

Having proved the banks lend 18.3 times shareholders funds I provide the following step-by-step simple calculations showing just what the banks really make out of lending next-to-nothing. How do do feel about their farcical fluctuating fixed and variable interest rates, and outlandish charges, now you know just how much profit they make from the fractional reserve swindle? Don't get mad - Get even. Tell everyone what is going on.

Year	The Bank has \$100	And lends it 18.3 times over @ 5%. They lend \$1,830	They get back	They now have

There are people who care about their country and will be part of a network pushing information that might save Australia from financial collapse. It is inevitable that the international fractional reserve banking swindle bubble will burst. We don't want to go down with other nations too gullible to save themselves.
