

IRREFUTABLE EVIDENCE

For those who have worked, slaved, saved, and still find themselves poor in their old age, and those who are about to find out the hard way.

At last I have found the two explanations that are the key to convincing academics and laymen how the Reserve Bank allowed private banks to rip us off.

These pages from the university text book "ECONOMICS - AUSTRALIAN EDITION" by John Jackson and Campbell R. McConnell, give the simplest academic explanation of Fractional Reserve Banking, and prove the universities taught students in the 1980s how the financial institutions were ripping us off.

The Statutory Reserve requirements have changed and new evidence to hand shows how much money is real and how much is created, so I have included the actual current money creation scenario.

Please recommend this book to all who doubt the information supplied by THE MONEY MASTERS video and other great works which show workers how to protect their savings and superannuation.
